## **Abstracts**

The global Distributed Photovoltaic Power Generation Monitoring System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The distributed photovoltaic power generation monitoring system is a type of monitoring and control system used to manage and monitor small- to medium-sized photovoltaic power generation systems that are distributed across different locations. This system is designed to ensure the efficient operation of distributed photovoltaic power generation systems by collecting real-time data on energy production, consumption, and load balance from each site, and performing data analysis, fault diagnosis, and other functions to optimize system performance. The monitoring system typically consists of hardware components such as sensors, meters, data acquisition devices, and communication networks, as well as software components such as monitoring software, control algorithms, and data analytics tools. By providing a comprehensive view of photovoltaic power generation sites and their performance, the distributed photovoltaic power generation monitoring system helps to improve the reliability, stability, and profitability of distributed photovoltaic power generation systems.
