Abstracts

Distributed solar inverter is a device used in solar power systems to convert DC power generated by solar panels into AC power. It is usually installed near a photovoltaic array composed of solar panels, and uses electronic components to convert direct current into alternating current for domestic or commercial use. Distributed solar inverters usually have multiple functions, such as maximum power point tracking (MPPT), safety protection, communication interfaces, etc., to ensure the efficient operation and safety of the solar system. This type of inverter is usually connected to the grid, allowing excess power to be injected into the grid to achieve interconnection with the grid.

According to our (Global Info Research) latest study, the global Distributed Solar Inverter market size was valued at US$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
