Distributed temperature sensing technology measures the temperature distribution along a fiber optic line. A fiber optic line can be as long as 18.5 miles at a stretch, with recording instruments only at both the ends of the line. Thus, the system has no sensors, electronics, electrical connections, or electrical wires in the entire line. DTS technology is embedded into the fiber optic line and monitors the temperature of the entire line.

Scope of the Report:

This report focuses on the Distributed Temperature Sensing in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Fiber optic sensors use optical fibers as sensing elements. These sensors can sense temperature, displacements, pressure, vibrations, rotations, and the concentration of chemical species. Fiber optic sensors are small and have applications in the remote sensing field as they do not need any electrical power at the remote location. Moreover, these sensors are suitable for rough conditions, including high vibration, noise, extreme heat, unstable, and wet environments. These sensors are compact and can fit in limited spaces and can be positioned appropriately. The rising adoption of fiber optic sensors in structural monitoring is driving the adoption of DTS-based fiber optic cables and this trend is likely to continue during the forecast period as well.

Manufacturers in the DTS market have the need to innovate and adapt to the shifting business requirements to keep up with the rising competition. The manufacturers operate in a competitive environment and there is a constant need for innovations due to the rapid technological changes. The success of manufacturers is also dependent on

various factors such as the commercialization of equipment, services, and other products.

In terms of geographic regions, the Americas will be the major revenue contributor to the DTS market throughout the forecast period. The increased adoption of DTS systems by industries and the process and pipeline monitoring applications in North America will drive the growth of the market in the region. Additionally, the increasing demand for fire detection and the rising need for power cable monitoring, will also contribute to the DTS market's growth in the Americas.

The worldwide market for Distributed Temperature Sensing is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
