## Abstracts

According to our (Global Info Research) latest study, the global Diphtheria Treatment market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Diphtheria is an infectious disease caused by the bacterium *Corynebacterium diphtheria* causing severe sore throat and fever leading to narrowing of the air passages and barking cough. Diphtheria may also affect the skin, eyes, or genitals and may cause myocarditis, bleeding and kidney problems.

The global diphtheria treatment market is growing at a slow rate due to high effectiveness and efficiency of the vaccine, falling profitability of vaccine manufacture, side effects associated with vaccines such as type A immune reaction and allergies, variability in the efficacy of vaccines. Financial restraints such as falling returns on investment and the resultant exit of a number of players from vaccine manufacture will affect the future growth of vaccines.
