According to our (Global Info Research) latest study, the global Distributor for Volumetric Lubrication System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The distributor of a positive displacement lubrication system is one of the important components in the system. It is responsible for taking out a fixed volume of lubricant from the central lubricating oil tank or lubricating oil source and distributing it to each lubrication point one by one. These dispensers typically include one or more positive displacement pumps that ensure a fixed amount of lubricant is delivered with each pump. In each cycle, the distributor delivers a certain volume of lubricant into the lubrication pipeline of the system, and then reaches each lubrication point to complete the lubrication task.
