## Abstracts

The global Distributor for Volumetric Lubrication System market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The distributor of a positive displacement lubrication system is one of the important components in the system. It is responsible for taking out a fixed volume of lubricant from the central lubricating oil tank or lubricating oil source and distributing it to each lubrication point one by one. These dispensers typically include one or more positive displacement pumps that ensure a fixed amount of lubricant is delivered with each pump. In each cycle, the distributor delivers a certain volume of lubricant into the lubrication pipeline of the system, and then reaches each lubrication point to complete the lubrication task.
