Abstracts

The global District Heating and Cooling market size is expected to reach \$ 568010 million by 2032, rising at a market growth of 9.8% CAGR during the forecast period (2026-2032).

District energy, both heating and cooling, tie together the energy generating sources in a city with buildings and facilities having a need of heating and/or cooling. Instead of each building having its own heating or cooling system, the energy is delivered to several buildings in a larger area from a central plant. The water based distribution system guarantees that heat and cooling arrive safely to the end users. With district heating, energy is saved overall, as it takes advantage of resources that would otherwise not be have been used, making it an efficient and sustainable solution to satisfy the local heat and cooling demand in a city.

The key players of District Heating and Cooling include ENGIE, NRG Energy, Fortum, etc. The top three players hold a share over 15%. Asia-Pacific is the largest market, with a share about 32%. In terms of product type, District Heating is the largest segment, which occupied for a share of about 75%. For application, Residential is the largest segment, which has a share about 39%.
