The global District Heating Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

District Heating Valve (DHV) is a valve used in district heating systems. District heating is a centralized way of heating where heat is generated at a central heating plant and then transported through pipelines to heat exchangers in buildings, where the heat is then transferred to the building's heating or hot water systems. DHVs are used to control the flow and temperature of the district heating system to ensure that heat is effectively transferred to the building while avoiding overheating or underheating.
