This report focus on Dive Cylinder Valve market.

A diving cylinder, scuba tank or diving tank is a gas cylinder used to store and transport the high pressure breathing gas required by a scuba set. It may also be used for surface-supplied diving or as decompression gas or an emergency gas supply for surface supplied diving or scuba. Cylinders provide gas to the diver through the demand valve of a diving regulator or the breathing loop of a diving rebreather.

Diving cylinders are usually manufactured from aluminium or steel alloys, and are normally fitted with cylinder valve for filling and connection to the regulator.

The development of the marine research and entertainment industry has greatly promoted the diving market.

The Global Info Research report includes an overview of the development of the Dive Cylinder Valve industry chain, the market status of Low Pressure (LP) (
