DJ gear refers to the equipment used by DJs (Disc Jockeys) to create, mix, and play music for a live audience. It typically includes a combination of hardware and software, such as DJ controllers, turntables, CDJs, mixers, headphones, and speakers.

A DJ controller is a device that allows the DJ to control the music on their computer or other digital music sources using buttons, knobs, and faders. Turntables are a classic piece of DJ equipment that allow DJs to play vinyl records and manipulate the music using techniques such as scratching and beat matching. CDJs are similar to turntables, but play CDs or digital music files, and often come with built-in effects and looping features. A mixer is used to blend and control the levels of multiple audio sources, allowing the DJ to create a seamless mix of music.
