At the heart of every DLP chipset is an array of highly reflective aluminum micromirrors known as the digital micromirror device (DMD). The DMD is an electrical input, optical output micro-electrical-mechanical system (MEMS) that allows developers to perform high speed, efficient, and reliable spatial light modulation. DLP chipsets allow users to obtain the maximum pattern rates for the associated DMD(s), as well as the ability to synchronize pattern display with external sensors, cameras, motors, or other devices.

According to our (Global Info Research) latest study, the global DLP Chipset market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
