Abstracts

DM is one of the emerging PLM solutions in the world. The adoption of DM allows the engineers to create a virtual environment of the manufacturing process starting from product definition to manufacturing. It creates digital models of tools, assembly lines, work centers, plant layout, and resources. DM provides simulation, visualization, analytics, and collaboration to develop and manufacture products. DM smoothens the flow of product and plant information without hampering consistency in product designing during a change in processes.

Scope of the Report:

This report studies the DM In Electrical and Electronics market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the DM In Electrical and Electronics market by product type and applications/end industries. One of the major trends in the DM market is the growing focus on mobile applications such as manufacturing 360 and Tecnomatix 360. PLM manufacturers, such as PTC, have applications such as Windchill mobile; however, they do not have DM-specific applications like Siemens. These types of applications augment the mobility and ease of use of DM software across diverse locations. It is anticipated that most of the major players in the PLM industry will offer DM-specific mobile applications during the forecast period.

The DM market in the electrical and electronics is extremely fragmented with the presence of several PLM software manufacturers. Many electronics distributors have started to improve their market potential through various innovative strategies and mergers and acquisitions. The presence of many open-source manufacturers in the

market is posing a serious threat to the commercial manufacturers, further intensifying the competitive scenario in the electrical engineering market.
