Traditionally, product planning preceded process planning. This method can potentially lead to incompatibility between product and production processes, resulting in loss of time and capital. Digital manufacturing (DM) enables simultaneous product as well as process planning, thereby reducing the time taken for chalking out designs.

Scope of the Report:

This report focuses on the DM in Industrial Machinery in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. DM is an inevitable part of the industrial machinery industry. DM helps simulate a virtual environment and creates prototypes for the manufacturing set up. With the help of this simulation, designers can rectify issues related to design, manufacturing, and maintenance in early stages. Ergonomic analysis along with simulation for single parts and assemblies helps reduce the setup costs to a great extent, especially labor costs. Market manufacturers are currently focusing on reducing the adoption cost of digital manufacturing through the implementation of cloud-based product lifecycle management (PLM) software. For instance, Wipro, a global information technology firm is providing cloud-based PLM services for Siemens PLM Software's solution called Teamcenter. These services help electronics and semiconductor manufacturing companies to deploy Teamcenter on the cloud through Infrastructure as a Service (IaaS). Similar developments will propel the growth of this market during the forecast period.

The worldwide market for DM in Industrial Machinery is expected to grow at a CAGR of

roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
