Abstracts

The global DMS Camera for Vehicle market size is expected to reach \$ 1408 million by 2032, rising at a market growth of 11.2% CAGR during the forecast period (2026-2032). In 2025, global shipments of in-vehicle DMS cameras are estimated at approximately 36 million units, with an average selling price of around USD 18 per unit. A DMS camera for vehicles is an inward-facing visual sensing device installed inside the cabin to capture facial and head images of the driver. It provides raw visual data for driver monitoring functions such as fatigue detection, distraction recognition, gaze tracking, and driver identification. The product typically consists of a CMOS image sensor, lens module, infrared illumination components, and basic ISP circuitry, serving as the core front-end hardware of driver monitoring systems.

From a market perspective, in-vehicle DMS cameras are still in a rapid penetration phase, but overall installation rates have not yet reached full standardization, remaining concentrated in mid- to high-end passenger vehicles, new energy vehicles, and regions with early regulatory adoption. Compared with outward-facing ADAS cameras, DMS cameras have relatively lower resolution requirements but higher demands for low-light performance, infrared compatibility, and long-term reliability.

This report studies the global DMS Camera for Vehicle production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for DMS Camera for Vehicle and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
