## Abstracts

According to our (Global Info Research) latest study, the global DMS Camera for Vehicle market size was valued at US\$ 667 million in 2025 and is forecast to a readjusted size of US\$ 1408 million by 2032 with a CAGR of 11.2% during review period.

In 2025, global shipments of in-vehicle DMS cameras are estimated at approximately 36 million units, with an average selling price of around USD 18 per unit. A DMS camera for vehicles is an inward-facing visual sensing device installed inside the cabin to capture facial and head images of the driver. It provides raw visual data for driver monitoring functions such as fatigue detection, distraction recognition, gaze tracking, and driver identification. The product typically consists of a CMOS image sensor, lens module, infrared illumination components, and basic ISP circuitry, serving as the core front-end hardware of driver monitoring systems.

From a market perspective, in-vehicle DMS cameras are still in a rapid penetration phase, but overall installation rates have not yet reached full standardization, remaining concentrated in mid- to high-end passenger vehicles, new energy vehicles, and regions with early regulatory adoption. Compared with outward-facing ADAS cameras, DMS cameras have relatively lower resolution requirements but higher demands for low-light performance, infrared compatibility, and long-term reliability.
