Abstracts

The global DNA Extraction Services market size is expected to reach \$ 1257 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

DNA extraction services involve the processes and techniques used to isolate DNA from various biological samples, such as blood, saliva, tissues, or other cell types. These services are crucial in various fields, including research, clinical diagnostics, forensics, and genetic testing. DNA Extraction Services refer to outsourced services provided by third-party laboratories or genomics service providers, encompassing the extraction, purification, quality assessment, and delivery of DNA from client samples. These services typically involve the isolation of genomic DNA, cfDNA, microbial DNA, or high-molecular-weight DNA from a wide range of materials including blood, saliva, swabs, tissues, FFPE samples, cells, plants, animals, microorganisms, soil, feces, food products, and environmental samples. Furthermore, these services provide support for concentration determination, purity analysis, integrity assessment, as well as downstream applications such as PCR, sequencing, genotyping, microarray analysis, or long-term sample storage.

DNA extraction serves as a foundational step for NGS, Sanger sequencing, PCR, genotyping, pathogen detection, and molecular diagnostics. By outsourcing the extraction process to specialized laboratories, clients can minimize sample loss, increase throughput, and shorten project turnaround times. Research institutions, CROs, and sequencing service providers are increasingly adopting automated extraction platforms to process high-volume sample batches, thereby enhancing consistency, reducing manual errors, and meeting the large-scale sample requirements inherent in cohort studies, agricultural breeding, microbiome research, forensics, and preclinical studies. Market demand is currently expanding beyond standard gDNA

extraction to encompass more complex sample types and scenarios?including FFPE tissues, cfDNA, ctDNA, single cells, microbial samples, soil, feces, plant tissues, and food samples. GENEWIZ notes that its whole-genome sequencing services support DNA extraction for over 30 standard sample types, as well as hundreds of customized sample types; similarly, LGC Biosearch Technologies emphasizes its capability to develop both standard and customized nucleic acid extraction protocols tailored to a wide variety of starting materials and sample volumes.
