According to our (Global Info Research) latest study, the global DNA Magnetic Purification Kits market size was valued at USD 183.2 million in 2022 and is forecast to a readjusted size of USD 292 million by 2029 with a CAGR of 6.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

North America accounted for the largest share of the Magnetic Bead Purification Kits market in 2022. Factors such as significant R&D spending in biotechnology and pharmaceutical companies, technological advancements, and government support are the key factors driving the growth of the Magnetic Bead Purification Kits market in United States. On the other hand, the Asia Pacific region is expected to grow at the highest CAGR during the forecast period. An increasing number of genomic projects and increasing R&D investments by pharmaceutical & biotechnology companies in this region are some of the major factors supporting the growth of the Asia Pacific Magnetic Bead Purification Kits market.

The Magnetic Beads based DNA Purification Kits are designed for rapid and efficient purification of DNA from different samples including tissues, blood cells, bacteria and viruses. The magnetic beads are silica nano-beads with excellent nucleic acid binding properties. They contain super-paramagnetic Fe₃O₄ core and SiOH outer surface modified with SiO₂. They have low, non-specific adsorption achieved by optimizing the size of the nanobeads, the thickness of the SiO₂ layer and the SiOH density. Different kits represent a mixture of nanobeads of different sizes ranging from 80 nm-3 μm that allows the binding of small and large size DNA molecules. In this separation technique, magnetic beads bound to DNA are attracted to a magnetic rack. The DNA is then eluted

from the beads using a proprietary buffer system. The purified DNA can be used for many downstream applications including PCR, restriction digestion, Southern blot, sequencing etc.
