## Abstracts

The global DNA Magnetic Purification Kits market size is expected to reach \$ 292 million by 2029, rising at a market growth of 6.9% CAGR during the forecast period (2023-2029).

North America accounted for the largest share of the Magnetic Bead Purification Kits market in 2022. Factors such as significant R&D spending in biotechnology and pharmaceutical companies, technological advancements, and government support are the key factors driving the growth of the Magnetic Bead Purification Kits market in United States. On the other hand, the Asia Pacific region is expected to grow at the highest CAGR during the forecast period. An increasing number of genomic projects and increasing R&D investments by pharmaceutical & biotechnology companies in this region are some of the major factors supporting the growth of the Asia Pacific Magnetic Bead Purification Kits market.

The Magnetic Beads based DNA Purification Kits are designed for rapid and efficient purification of DNA from different samples including tissues, blood cells, bacteria and viruses. The magnetic beads are silica nano-beads with excellent nucleic acid binding properties. They contain super-paramagnetic Fe<sub>3</sub>O<sub>4</sub> core and SiOH outer surface modified with SiO<sub>2</sub>. They have low, non-specific adsorption achieved by optimizing the size of the nanobeads, the thickness of the SiO<sub>2</sub> layer and the SiOH density. Different kits represent a mixture of nanobeads of different sizes ranging from 80 nm-3 μm that allows the binding of small and large size DNA molecules. In this separation technique, magnetic beads bound to DNA are attracted to a magnetic rack. The DNA is then eluted from the beads using a proprietary buffer system. The purified DNA can be used for many downstream applications including PCR, restriction digestion, Southern blot, sequencing etc.
