## Abstracts

According to our (Global Info Research) latest study, the global DNA and RNA Oligonucleotide Synthesizers market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

DNA and RNA oligonucleotide synthesizers are instruments designed to create synthetic oligonucleotide sequences. The resulting DNA or RNA oligos are used in molecular applications, such as primers for PCR amplification, PCR assays, sequencing, or as hybridization probes. Oligonucleotide synthesizers generally operate as column-based systems utilizing a repetitive, cyclic process of reagent flow through. However, other platforms can use a different mechanism, such as cartridge and chip technology. Synthesizers often come with dedicated operating software, such as those that feature tools for flexible design and management of the synthesis procedure. These instruments are a useful addition to any molecular research team with a need for specialized DNA or RNA oligonucleotides.
