According to our (Global Info Research) latest study, the global DNA Origami market size was valued at US\$ 916 million in 2024 and is forecast to a readjusted size of USD 1467 million by 2031 with a CAGR of 7.0% during review period.

DNA origami is one of the most recent and widely used techniques for synthesizing nanoparticles by utilizing DNA molecules. The DNA origami approach aids in simplifying DNA nanostructures, using one long scaffold of single-stranded DNA to create 2D and 3D products. It is widely used in the construction of advanced nanorobots and other structures for analyzing and studying enzyme-substrate interactions, fluorescence, drug delivery, molecular motor actions, and light and other energy studies.
