According to our (Global Info Research) latest study, the global DNA Polymerases for PCR market size was valued at US\$ 1238 million in 2024 and is forecast to a readjusted size of USD 1906 million by 2031 with a CAGR of 5.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

DNA Polymerases for PCR are a group of enzymes required for DNA synthesis. Arthur Kornberg purified and characterized DNA polymerase from E.coli for the first time. It is a single-chain polypeptide now known as DNA polymerase-I. Scientists have now found five DNA polymerases in E. coli.

The main function of DNA polymerases is to duplicate the DNA content of a cell during cell division. They do so by adding nucleotides at 3'-OH group of the growing DNA strand.
