Abstracts

The DNA probe is a basic component in most molecular diagnostic techniques. The DNA probe is a labeled DNA strand synthesized in the laboratory. Its purpose is to hybridize with the target nucleic acid molecule to be identified from a biological sample. A probe is composed of a strand of 30-40 nucleotides called oligonucleotides. These oligonucleotides are labeled with a detector molecule. When hybridization occurs between the probe and the target organism's nucleic acid, the hybrid can be detected through the detector molecule.

Scope of the Report:

This report focuses on the DNA Probe-based Diagnostic in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Pathogenic microorganisms such as viruses, bacteria, parasites, or fungi are harmful to health and can cause infectious diseases. The development of different DNA diagnostic probes depends on the emergence of these new infectious diseases. It has been observed that more than 100 probes have been developed, while, others are still in the experimental stages. The development of DNA probe test used to detect bacterial infections caused by *Salmonella typhi* (food poisoning), *Escherichia coli* (gastroenteritis), and *Campylobacter hyointestinalis* is also increasing due to the increase in infectious diseases.

The DNA probe-based diagnostic market comprises of diversified international and regional local manufacturers. These manufacturers are increasingly competing against each other based on factors such as the quality, price, and market reach. Furthermore, factors such as product innovations, product or service extensions, and mergers and

acquisitions will strengthen the competitive environment of the DNA probe test market.

The worldwide market for DNA Probe-based Diagnostic is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
