DOA Plasticizer (Dioctyl Adipate) is a commonly used plasticizer with low volatility, good cold resistance, excellent flexibility and compatibility. It is often used to plasticize plastics such as soft polyvinyl chloride (PVC) and ethylene-vinyl acetate (EVA), and is especially suitable for materials that need to maintain softness and elasticity in low temperature environments. DOA plasticizer can effectively lower the glass transition temperature of the material, increase its ductility and wear resistance, and enable the material to maintain good physical properties under extreme temperatures. Due to its low toxicity and good environmental compatibility, DOA is widely used in food packaging, medical equipment, cable sheathing, synthetic leather and other products with high requirements for softness and safety.
