Abstracts

A DOC functions by oxidizing carbon monoxide (CO) and any unburnt hydrocarbon (HC) over a platinum group metal. DOC promotes chemical oxidation of CO and HC as well as the soluble organic fraction portion of diesel particulates. Additional benefits of DOC include oxidation of several non-regulated, HC-derived emissions, such as aldehydes or polycyclic aromatic hydrocarbon (PAHs), as well as reduction or elimination of the odor of diesel exhaust.

Scope of the Report:

This report focuses on the DOC and DPF in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Factors like the implementation of vehicular emission norms such as Euro 6 emission standards for commercial diesel vehicles and passenger cars and real-world emission testing procedures for diesel vehicles are primarily driving the DOC and DPF market. With the rise in global pollution levels prompting the governments to implement more stringent regulations on vehicular emissions, the DOC and DPF sales will increase exponentially. Moreover, with the growing demand for fuel efficiency in vehicles due to the volatility of fuel prices, OEMs are strategizing to improve fuel economy and power output of their vehicles, leading to the greater installation of the DOC and DPF.

The global DOC and DPF market are extremely competitive with the presence of a limited number of well-established manufacturers. These players are focusing on increasing their customer base and increasing their investments in R&D. The competitive environment in the market is likely to intensify in the coming years with advances in technology and government regulations. Also, OEMs are expected to get

into long-term collaborations with DOC and DPF manufacturers as the quality of materials used, and the design is specific for each vendor.

The worldwide market for DOC and DPF is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
