## Abstracts

The global Dodecenyl Succinic Acid market size is expected to reach \$ 144 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Dodecenyl succinic acid (abbreviated as T746) is a highly effective, oil-soluble industrial rust inhibitor suitable for the manufacture of rust-preventive turbine oils, hydraulic oils, gear oils, and greases. It provides excellent corrosion protection for ferrous and non-ferrous metals by forming a dense protective film on the metal surface. The typical addition amount is 0.02% to 0.8%.

Dodecenyl succinic acid is an important fine chemical intermediate, and its industrial chain is closely linked to the petrochemical industry. The upstream processes mainly rely on refinery by-products, with the core raw materials being tetrapropylene (dodecene) and maleic anhydride. Under heating conditions, the two substances are synthesized into dodecenyl succinic anhydride through an olefin addition reaction, and then hydrolyzed to obtain the acid. The technological barriers to its production lie in controlling the isomer composition and refining the product's color.

Global sales in 2025 are projected to be approximately 12,000 tons, with an average market price of approximately US\$8,926 per ton. The industry's gross profit margin is in the range of 15%–30%.

This report studies the global Dodecenyl Succinic Acid production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Dodecenyl Succinic Acid and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and
