Dog-shaped Quadruped Robots are legged robotic systems designed with four-legged mobility similar to animal locomotion. They are used for inspection, patrol, mapping, research, and remote operation in environments where wheels are less effective. Their advantages include obstacle crossing, terrain adaptability, and flexible movement in industrial and outdoor settings.

The industrial chain of Dog-shaped Quadruped Robot includes upstream motors, reducers, controllers, sensors, batteries, structural parts, and embedded chips. Midstream covers robot design, motion control integration, software development, assembly, and testing. Downstream applications mainly include industrial inspection, security patrol, public safety, education, research, and field robotics deployment.

The dog-shaped quadruped robot market is expanding rapidly, driven by industrial inspection, infrastructure maintenance, and logistics automation demands. These robots

offer superior mobility on unstructured terrain, making them ideal for construction sites, power grids, and mining operations. Key applications include visual, thermal, and acoustic monitoring to enhance safety and reduce human exposure to hazardous environments. Technological advancements in AI, sensor fusion, and battery life are improving autonomy and reliability. Companies focus on rugged design, low maintenance, and integration with cloud platforms for data analytics.
