This report studies the Domain Name System Tools market. Domain Name System (DNS) is a decentralized naming system for computers, services, or any resource connected to the Internet or a private network. It consists of various information with domain names assigned to each of the participating entities. It translates the domain names into the numerical Internet protocol (IP) addresses required for identifying computer services and devices with the underlying network protocols. The DNS is an essential component of the functionality of the Internet, as it provides a worldwide, distributed directory service. Most mainstream operating systems come with a standard set of DNS tools that allow you to perform certain tasks. Many of these tools are useful for analyzing DNS records. You can perform manual DNS lookups, through your locally defined DNS server or via alternate servers in order to make sure your DNS records have been updated or if you are having problems they can help to diagnose them. It is also possible to flush your DNS and clear the cache if needed.

Global Domain Name System Tools key players include GoDaddy, Akamai Technologies, Verisign (NeuStar), MarkMonitor (Clarivate Analytics), NetNames (CSC), etc. Global top five manufacturers hold a share about 45%. North America is the largest market, with a share about 45%, followed by Europe, with a share about 25 percent. In terms of product, Managed DNS Services is the largest segment, with a share about 75%. And in terms of application, the largest application is Large Enterprises, followed by Medium-sized Businesses, Small Businesses, etc.
