According to our (Global Info Research) latest study, the global Domes for Semiconductor Equipment market size was valued at US\$ 125 million in 2025 and is forecast to a readjusted size of US\$ 183 million by 2032 with a CAGR of 5.6% during review period.

The domes utilized in the HDP CVD process consist of various components such as ceramics, copper tubing, brackets for securing the tubing, and silicones. Notably, the copper tubing, which boasts high thermal conductivity, undergoes chemical reactions with the coolants circulating within during the process. Consequently, precipitates accumulate and rust forms, leading to leaks. This results in a relatively short lifespan for the copper tubing compared to other dome components, ultimately becoming the primary factor that necessitates frequent replacement of the entire dome assembly.
