A zero-turn mower is a specialized riding mower that uses two independent drive wheels, similar to a tank, to achieve a virtually zero turning radius. In 2024, global Domestic Electric Zero Turn Mower production reached approximately 183 k units, with an average global market price of around US\$ 4500 per unit.

The growth of the domestic electric zero turn lawn mower market is primarily driven by rising demand from middle-class and affluent families for efficient maintenance of large gardens, increased consumer environmental awareness, advancements in lithium battery technology that have increased range and power, and restrictions on traditional gasoline-powered lawn mowers due to stricter emissions regulations. Household users are seeking a solution that significantly saves time and effort, provides a quiet and clean environment, and offers the professional ability to manage complex gardens. Domestic electric zero-turn mowers meet these needs.
