Abstracts

The global Door Linear Motor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The market for linear motors for doors is promising as their use in automatic door control systems is increasing. As people's demand for safety, convenience and intelligent control continues to increase, the market demand for linear motors for doors is also increasing. Automatic door systems are widely used in commercial, residential and industrial fields, so the market prospects for door linear motors are very optimistic.

A door linear motor is an electric linear actuator commonly used in automatic control systems for opening and closing doors. This kind of motor promotes the opening and closing of the door through linear motion rather than rotational motion. Door linear motors are widely used in door control systems such as automatic doors, rolling shutter doors, garage doors, sliding doors, and industrial doors. They usually feature high precision, low noise, high efficiency and programmable control.
