Abstracts

The global Dope-Dyed Recycled Polyester market size is expected to reach \$ 10724 million by 2032, rising at a market growth of 8.9% CAGR during the forecast period (2026-2032).

Dope-dyed recycled polyester refers to recycled polyester fibers and filaments produced by adding color masterbatch directly into the polymer melt during spinning, eliminating the need for conventional dyeing processes. In 2025, the average global selling price of dope-dyed recycled polyester is estimated at approximately US\$1,480 per metric ton, with global sales volume reaching around 3.85 million metric tons. The industry typically maintains a gross margin range of 22%–38%, supported by reduced water and chemical usage, lower energy consumption, stable color consistency, and increasing demand from sustainable textile supply chains. The value chain includes upstream recycled PET bottle collection and processing, midstream polymer modification, spinning and dope-dyeing operations, and downstream applications across apparel, home textiles, automotive textiles, and industrial fabrics.

This report studies the global Dope-Dyed Recycled Polyester production, demand, key manufacturers, and key regions.
