According to our (Global Info Research) latest study, the global Doppler Velocity Flow Meter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The Doppler velocity flowmeter is measured by the ultrasonic Doppler principle. According to different application scenarios, it can also be called a river flowmeter, a sewer flowmeter, a channel flowmeter, a farmland irrigation flowmeter, and a non-full pipe flowmeter. Count and so on. It does not need to cut the pipeline to install the pipe segment sensor like the electromagnetic flowmeter, nor does it need to use the interception device, let alone install a fixed weir flume to control the flow of water from the fixed outlet. The Doppler flowmeter can measure in both clear and muddy water, and can also measure reverse flow velocity.
