The global Doppler Velocity Flow Meter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Doppler velocity flowmeter is measured by the ultrasonic Doppler principle. According to different application scenarios, it can also be called a river flowmeter, a sewer flowmeter, a channel flowmeter, a farmland irrigation flowmeter, and a non-full pipe flowmeter. Count and so on. It does not need to cut the pipeline to install the pipe segment sensor like the electromagnetic flowmeter, nor does it need to use the interception device, let alone install a fixed weir flume to control the flow of water from the fixed outlet. The Doppler flowmeter can measure in both clear and muddy water, and can also measure reverse flow velocity.

This report studies the global Doppler Velocity Flow Meter production, demand, key manufacturers, and key regions.
