Dorsal Night Splints are a medical aid designed to be worn at night, primarily for the treatment of conditions such as plantar fasciitis and Achilles tendinitis. It provides a gentle stretch to the plantar fascia and calf muscles by keeping the ankle in a certain position during sleep or rest, helping to relieve pain and promote healing. Dorsal Night Splints are usually made of breathable materials and are designed to be lightweight, comfortable, and easy to wear at night. It covers a small portion of the bottom of the foot and relies primarily on pulling the front/dorsal side of the foot toward the ankle to achieve the 90-degree angle required to prevent the plantar fascia and intrinsic muscles from shortening during the night.
