According to our (Global Info Research) latest study, the global Dosimetric Test System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Dosimetry is the determination and measurement of the amount or dosage of radiation absorbed by a substance or living organism. Dosimetry is often used to monitor personnel working with radioactive materials or patients receiving radiotherapy. Dosimetry measurements are also used to test performance of imaging equipment, for optimization of practice, or for risk assessment in diagnostic radiology. Dosimetry tests are also used to measure sound energy. Dosimeters monitor external radiation exposure and provide a permanent, lifetime record of occupational dose.
