Abstracts

Dosimetry equipment is used to measure the amount of energy deposited by ionizing radiation. The devices are used to measure and estimate the effective dose received by the human body through exposure to external ionizing radiation. Dosimetry equipment devices are used in places where people deal with hazardous waste or radioactive substances such as hospitals and nuclear power plants.

Scope of the Report:

This report focuses on the Dosimetry Equipment in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The awareness about the health hazards of radiation is rising among the workers employed in radiation-prone areas such as nuclear power plants and radiation therapy centers. The increasing access to the Internet has led to the rise in awareness about the ill effects of radiation exposure and the workers are now well-informed about the safety standards. Companies are concentrating on training the employees about the radiation hazards and the safety measures to be taken while exposed to radiation prone areas. This will increase the awareness of the workers and will consequently drive the demand for dosimetry equipment such as ring dosimeters, subsequently fueling market growth.

The dosimetry equipment market is intensely competitive and consists of several well-established vendors providing similar products. The market players are working on capturing the market by acquiring companies with expertise in providing services to specific sectors such as medical or nuclear power. The vendor competition in the market is based on new product launches, additional features such as mobile

integration, and providing dosimetry services for industrial applications such as defense, healthcare, nuclear power, academia, and research.

The worldwide market for Dosimetry Equipment is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
