The global Double-Balloon Enteroscopy (DBE) Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The double-balloon electronic enteroscope is to add an overtube with an air bag at the top to the original push-type enteroscope, and also install an air bag on the top of the enteroscope. After using the outer cannula, it can prevent the enteroscope from coiling in the stomach, and improve the insertability of the enteroscope into the jejunum through the Qu's ligament. Under normal circumstances, it can reach the middle and lower part of the ileum, and part of it can reach the terminal ileum. The inspection scope is greatly expanded. If the entrance or the anal side of the mirror are combined, it is possible to obtain a comprehensive and thorough inspection of the entire small intestine. Electronic enteroscopy has a wide field of view, clear images, and is feasible for endoscopic biopsy and related treatments.
