## Abstracts

The global Double Centrifugal Fan Blade market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The double centrifugal fan blade is a centrifugal fan blade, which is characterized by being composed of two blades and a wheel disc. Compared with single-link centrifugal fan blades, double-link centrifugal fan blades have higher air volume and higher pressure output capability. The working principle of double centrifugal fan blades is similar to that of single centrifugal fan blades. Driven by the motor, the wheel begins to rotate, generating centrifugal force. Centrifugal force pushes the air toward the blades, causing the blades to rotate and pull the air into the center of the blades, where it is then discharged through the outlet. Because the double centrifugal fan has two blades and a disc, it can produce greater air volume and higher pressure.

This report studies the global Double Centrifugal Fan Blade production, demand, key manufacturers, and key regions.
