Double Chamber Vacuum High Pressure Gas Quenching Furnace is industrial furnace equipment used for vacuum heat treatment of metal parts. They typically consist of a heating chamber and a quenching chamber, enabling heating, heat preservation, and surface protection treatment in a vacuum environment. The workpieces are then rapidly cooled via oil quenching or air cooling to improve their hardness, wear resistance, and dimensional stability. The upstream mainly includes the vacuum furnace body, heating elements, insulation materials, vacuum pumps, oil quenching systems, air cooling systems, heat exchangers, temperature control instruments, and automatic control systems. The midstream involves equipment design and manufacturing, vacuum sealing, temperature field control, and system integration. Downstream applications include automotive parts, aerospace, molds, bearings, construction machinery, energy equipment, and heat treatment processing services.
