Double-cladding ytterbium-doped fiber is a highly efficient gain medium commonly used in fiber lasers and amplifiers. This fiber features a dual-cladding structure that captures more pump light through the outer cladding, enhancing energy conversion efficiency. Ytterbium ions (Yb³⁺) serve as the dopant, offering a broad absorption band and efficient laser output, making it ideal for high-power laser applications such as material processing, medical devices, and optical communications. Double-cladding ytterbium-doped fibers are widely applied in the field of fiber lasers, providing stable high-power output.
