The global Double Conduction Heating Cable market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The sheath of conductive polymer material is sandwiched between the two metal wires of the dual-conduction heating cable. It is usually composed of metal wires, conductive polymer materials, and a sheath. It has the characteristics of wide application range, convenient installation, and high heating efficiency.

The double conduction heating cable is an electric heating device with two heating cores inside, forming a self-loop. The inner core of the double conduction heating cable is composed of cold wire and hot wire, and the outside is composed of insulating layer, grounding layer, shielding layer and outer sheath. The heating cable buried in the filling layer transmits heat energy through the floor or other heat media in the form of radiation. Volatilize and form a thermal cycle.
