A Double Convoluted Air Spring is a type of air spring used in the suspension system of heavy-duty vehicles and trucks. It is made up of two convoluted layers of rubber and polyester reinforcement, which give it a high load-carrying capacity and resistance to wear and tear. The double convoluted design provides a larger load-bearing surface area, allowing for a greater amount of support and stability when carrying heavy loads. It also allows for more flexibility in the suspension system, helping to absorb shocks and vibrations on rough roads.
