A double disc slotted double brake disc is a more complex and high-performance braking component. It consists of two parallel circular discs, each typically having slots or grooves on their braking surfaces. These slots serve functions like clearing debris, enhancing heat dissipation, and ensuring consistent contact between brake pads and the discs. The double disc setup provides increased surface area for the brake pads to grip during braking, resulting in enhanced braking power and more efficient heat dissipation compared to a single disc slotted brake disc, making it suitable for applications where extreme braking performance and heat management are crucial, such as in high-performance vehicles, racing cars, and some heavy-duty vehicles.
