Abstracts

The global Double Drum Vibratory Rollers market size is expected to reach \$ 3813 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

In 2025, global sales of double drum vibratory rollers are projected to reach 50,000 units, with an average selling price of US\$50,000 per unit. Double-drum vibratory rollers are heavy machinery widely used in road construction, airport runways, parking lots, and other projects. Their main features include two large steel drums and a vibration system, which compacts soil, asphalt, or concrete through drum vibration, thereby improving ground bearing capacity and ensuring road surface smoothness and stability. This equipment is suitable for large-scale construction projects, especially in foundation treatment and road repair, providing efficient compaction operations.

Upstream raw materials mainly include high-strength steel, hydraulic components, engines, and vibration systems, while downstream supplies primarily go to construction companies, road construction companies, and various heavy machinery rental companies. In the future, with further increases in infrastructure construction and rising demand for efficient construction equipment, the double-drum vibratory roller market will continue to expand. Furthermore, the global promotion of green and smart building requirements is driving the development of machinery towards energy conservation, environmental protection, and intelligentization, further promoting innovation and application of this type of roller. Total production capacity is projected at 80,000 units, with a gross profit margin of approximately 25%.

With the growth of market demand and the improvement of technology, the production efficiency of road rollers will be further improved, and the consumption of upstream raw

materials will be gradually reduced. It is expected that the market will continue to play an important role in infrastructure construction, providing abundant business opportunities and growth potential.
