According to our (Global Info Research) latest study, the global Double Dry Gas Seals market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Composed of two sets of friction pairs, it forms a sealed chamber filled with pressurized nitrogen. During operation, a gas film of about 3 microns is formed between the friction pairs, enabling non-contact operation of the friction pairs, which prevents wear and heat generation. The principle of gas blocking is adopted. Adding gas with a pressure higher than the medium pressure to the sealed chamber can achieve zero leakage of the process medium. Only a trace amount of gas leaks into the environment. Nitrogen, which is environmentally friendly and safe, is used as the sealing gas.
