Abstracts

According to our (Global Info Research) latest study, the global Double-end Terminal Crimping Machine market size was valued at US\$ 495 million in 2025 and is forecast to a readjusted size of US\$ 677 million by 2032 with a CAGR of 4.6% during review period.

A double-ended terminal crimping machine is a fully automatic industrial equipment specifically designed for wire harness processing. It can automatically perform wire cutting, stripping at both ends, and crimping of terminals at both ends (including inserting into connector housings). It utilizes high-precision servo motors and PLC control to achieve efficient and stable wire processing.

The dual-head terminal crimping machine industry chain reflects the deep integration of precision machinery and motion control technology. The upstream segment primarily involves the supply of core components, including servo motors, PLC controllers, precision sensors, pneumatic components, and crimping dies (blades) with extremely high wear resistance requirements.

Global sales are projected to reach approximately 170,000 units in 2025. Actual prices vary significantly depending on brand, model, and level of automation, with market prices ranging from approximately \$1,500 to \$6,800 per unit. The industry's gross profit margin is in the range of 25% to 40%.

Wire harness processing is traditionally a labor-intensive production process. In industries such as automotive manufacturing, manual or semi-automatic crimping methods are inefficient and prone to quality fluctuations. Double-headed terminal

crimping machines, however, can replace manual labor with automated equipment to achieve highly repeatable and stable crimping processes, thus becoming a crucial piece of equipment for advancing production line automation.

The development of the double-ended terminal crimping machine industry shows an overall trend towards higher automation, precision, and reliability, while also facing some constraints and challenges. Currently, this equipment is one of the key components in automatic wire harness processing systems. It can perform integrated cutting, stripping, and crimping operations on both ends of the wire, significantly improving production efficiency and consistency. The market size is continuously expanding, especially against the backdrop of increasing demand in large-scale wire harness applications in industries such as automotive, electronics, industrial manufacturing, and telecommunications.
