According to our (Global Info Research) latest study, the global Double Head Screw Tightening Machine market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A double head screw tightening machine is a mechanical device for tightening screws, bolts and other threaded connections, with two tightening heads that can process two screws or bolts at the same time. These machines are very common in industry and manufacturing to increase productivity, ensure fastening quality and reduce human labor. Future double-head screwdrivers will be more intelligent and have the ability to integrate with factory automation systems. This means they can share data and work together with other machines and systems to improve productivity and quality.
