Abstracts

According to our (Global Info Research) latest study, the global Double Jacketed Metal Gaskets market size was valued at US\$ 158 million in 2025 and is forecast to a readjusted size of US\$ 209 million by 2032 with a CAGR of 4.1% during review period.

Double Jacketed Metal Gaskets consist of a metal shell and a soft, non-metallic filler. The internal filler provides excellent compressibility and resilience, while the outer jacket protects the core material from media erosion. It is one of the most widely used types of metal-jacketed gaskets in industrial applications.

Upstream inputs primarily include sheet metal, steel strips, and soft filler materials. Common materials for the metal layer include stainless steel, low-carbon steel, soft iron, nickel-based alloys, copper, and aluminum, while fillers may consist of flexible graphite, non-asbestos compressed fiber sheet, PTFE, or ceramic fiber; material selection directly determines temperature and corrosion resistance, compression-recovery characteristics, and cost. Midstream processes mainly involve metal stamping, edge folding/jacketing, welded partition bars, custom shaping, and dimensional inspection. Downstream applications are concentrated in heat exchangers, boilers, pressure vessels, reactors, and pump/valve equipment flanges; these gaskets are particularly suitable for sealing large-scale, non-standard equipment, as well as units featuring stiffening ribs or pass partition plates.

Global sales volume is projected to reach approximately 4.8 million units in 2025, with a mainstream ex-factory price of roughly \$28-\$36 per unit and gross margins for leading manufacturers ranging from 25% to 42%.
