Abstracts

The global Double-Layer Backpacking Tent market size is expected to reach \$ 808 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

Double-layer backpacking tents refer to tents that can be camped outdoors. Usually, the functions include rainproof, sunscreen, windproof, breathable and temperature insulation. In 2025, global Double-Layer Backpacking Tent production reached approximately 2800 k units, with an average global market price of around 180 US\$/Unit. The production capacity of Double-Layer Backpacking Tent reaches 3500 k units, and the industry's gross profit margin is approximately between 20% and 40%.

The demand for double-layer backpacking tents continues to grow, primarily driven by multiple factors, including the global popularity of outdoor hiking and lightweight camping activities, increasing consumer demands for safety and comfort during camping in inclement weather, widespread recognition of the significant advantages of double-layer structures in terms of rain and condensation protection, the gradual decrease in the cost of high-performance lightweight materials making the products more accessible, and the promotion of in-depth camping experiences as a lifestyle trend by social media and outdoor content platforms. Simultaneously, climate change leading to increased rainfall frequency and intensity is also prompting users to prioritize double-layer designs with more reliable protection, further accelerating their mainstream adoption among backpackers.
