Double-leg chain sling is a lifting tool used for lifting operations, consisting of two chains and a central connection point. Its two chains are connected to the crane or lifting equipment respectively, and the central point is connected to the lifting ring or lifting point of the hoisted object. Double-leg chain sling is usually used to carry heavier objects and can achieve stable lifting of objects. Its design can balance the gravity of the hoisted objects, provide uniform load distribution, improve safety and efficiency, and is widely used in lifting operations in industries such as construction, manufacturing, and petroleum.
